ABOUT ME

I'm a Software Engineer with hands-on experience building full-stack features for internal ERP systems and backend microservices in Java and Spring Boot. Skilled in JavaScript, PHP, Laravel, and Python, with a strong focus on automating workflows, integrating APIs, and consolidating data across systems.

Passionate about applying Generative AI, LLMs, and AI-driven development to boost productivity — from building custom scripts and automations to refining features with prompt engineering. Currently expanding my skill set into cybersecurity, driven by a genuine interest in building more secure and resilient systems.

Background also includes hands-on experience in financial operations (cash flow management, bank reconciliation, and accounts payable/receivable), which shaped a practical, detail-oriented approach to problem-solving that I bring into software development.

Always looking to learn, automate, and build things that make a real difference.

PROFESSIONAL EXPERIENCE

SOFTWARE ENGINEER – 3D LAB – 09/2026 – Present – Belo Horizonte, Brazil

- Worked on the development of internal ERP modules, architecting, planning, and implementing full-stack features for web systems.
- Application of Generative AI, LLMs, AI agents, Prompt Engineering, and AI-Driven Development, creating scripts and automations, refining features, and improving productivity.
- Development and maintenance of solutions using JavaScript, PHP, Laravel, Python, databases, and API integrations.
- Participation in agile development cycles (sprints, planning, review), feature testing, structured bug reporting, and creation/maintenance of technical documentation.

SOFTWARE DEVELOPER – 02/12/2025 – 06/30/2026 – Belo Horizonte, Brazil

- Developed and deployed a Java backend system focused on automating repetitive tasks, eliminating manual processes and boosting team productivity.
- Implemented integrations for automated cash flow management (processing volumes of up to R$100k/month) through automatic data feeds into smart spreadsheets.
- Modeled data, refactored code, and structured event-driven architectures for the systematic capture and recording of critical business information.
- Maintained and evolved Java and Spring Boot microservices, focusing on the continuous automation of administrative workflows.
- Created new features, REST APIs, and optimized integrations with external systems for real-time consolidation of financial data.
- Supported scripts and algorithms for the manipulation, validation, and automatic entry of data into relational databases and dynamic spreadsheets.

FINANCIAL ANALYST – BENERICKS COCKTAIL CO – 10/01/2020 – 02/01/2025 – Belo Horizonte, Brazil

- Responsible for controlling and monitoring the company's cash flow.
- Handled accounts payable and receivable, ensuring compliance with financial deadlines.
- Performed bank reconciliation and verification of financial transactions.
- Prepared management reports and indicators to support decision-making.
- Issued, verified, and controlled invoices, payment slips, and financial documents.
- Supported the monthly financial close and organization of accounting information.
- Controlled expenses, budget, and monitored operating costs.
- Liaised with financial institutions for the management of payments, receipts, and banking services.
- Automated financial processes using advanced spreadsheets and digital tools to reduce manual activities.
- Developed solutions to optimize financial routines, integrating technology into internal processes and increasing operational efficiency.

- Supported the administrative, accounting, and tax areas, ensuring the integrity of financial information.
- Participated in the identification and continuous improvement of processes, contributing to greater control and productivity in the area.

PROJECTS

Finance Sync API — 01/01/2026 – Present

A REST API built in Java with Spring Boot to automate cash flow processes. The system acts as an integration middleware, receiving financial transaction data via HTTP requests and posting it automatically and in real time to management control spreadsheets in Google Sheets.

Technologies Used: Java 17, Spring Boot (Web), Lombok, Google Sheets API v4, Google Auth Library (Service Accounts), Maven

Link: https://github.com/Inwtn/API-Finance-Sync

Bank Reconciliation Engine

An automatic bank reconciliation engine that cross-references bank statements (OFX/CSV) with financial entries recorded in the system, identifying what has been paid, what is pending, and where discrepancies exist.

Features:

- Upload of statements in OFX and CSV formats
- Automatic matching by amount, type, and date (with configurable day tolerance)
- Classification of each transaction as Reconciled, Divergent, or Pending
- Web dashboard for viewing results
- History of all imports performed
- REST API documented with Swagger UI

CERTIFICATIONS

Google, 2026 — Google Cybersecurity

Fundamentals of information security, threat identification, vulnerability management, and risk mitigation. Practical knowledge of network security and architecture, operating systems (Linux), SQL and Python for cybersecurity, as well as the use of SIEM and IDS tools for monitoring, detection, and incident response.

IBM, 2026 — Started with Cybersecurity

Introduction to the essential concepts of cybersecurity and the current digital threat landscape. Understanding of data protection principles, encryption, identification of the main types of attacks (such as malware and social engineering), and application of best defense practices in corporate and personal environments.

IBM — Web Development Fundamentals

Development of fundamental skills for building web applications and interfaces. Hands-on experience with semantic page structuring using HTML, styling and responsive design with CSS, as well as implementing interactivity, DOM manipulation, and client-side programming logic using JavaScript.

Santander — Data with Python and AI

Training in data analysis and Artificial Intelligence using Python. Application of essential libraries for data collection, processing, manipulation, and visualization, as well as exploration and implementation of basic Machine Learning concepts and algorithms for problem-solving and data-driven decision-making.

Santander — RAG with ChromaDB, LlamaIndex and Python

In-depth study of advanced generative AI architectures with a focus on Retrieval-Augmented Generation (RAG). Hands-on experience building applications integrated with language models (LLMs) via Python, using LlamaIndex for data orchestration and ChromaDB as a vector database for efficient context storage and retrieval.

EDUCATION

SYSTEMS ANALYSIS AND DEVELOPMENT – 01/01/2025 – Present – Belo Horizonte, Brazil

Newton Paiva

Website: https://www.wyden.com.br

Field of study: Software and computer application development and analysis

SKILLS

Backend & APIs: Java, Spring (Spring Boot), ASP.NET / ASP.NET (MVC), PHP, Laravel, Python, JavaScript

Frontend & Mobile: Android Studio Application Development - Kotlin, ReactJS (Intermediate), HTML/CSS/JS, Jetpack Compose, JavaScript Framework

Data & Tools: MySQL, PostgreSQL, GitHub knowledge, Postman, GitHub / GitLab, Firebase

AI & Automation: Generative AI, LLMs, AI Agents, Prompt Engineering, AI-Driven Development

Cybersecurity: Good knowledge of Cybersecurity

LANGUAGE SKILLS

Native language(s): PORTUGUESE

Other language(s):

ENGLISH — Listening: B2 | Reading: B2 | Spoken Production: B2 | Spoken Interaction: B2 | Writing: B1

Levels: A1 and A2: Basic user; B1 and B2: Independent user; C1 and C2: Proficient user
