Isaac Almeida

Software Engineer | Java, Spring Boot, Node.js, Python | API Integration and Workflow Automation

Brazil | +55 31 99204-1584 | isaacreis.dev@gmail.com | github.com/Inwtn

PROFESSIONAL SUMMARY

Software Engineer with hands-on experience building full-stack features for internal ERP systems and backend microservices in Java and Spring Boot. Skilled in JavaScript, PHP, Laravel, and Python, with a focus on workflow automation, API integrations, and consolidating data across systems. Applies Generative AI, LLMs, and AI-driven development to increase productivity, from custom automation scripts to prompt-engineered features. Background in financial operations (cash flow, bank reconciliation, accounts payable and receivable) adds a detail-oriented approach to software work. Google Cybersecurity certified and continuing to build security skills.

TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript, Python, PHP, Kotlin, SQL

Backend and APIs: Spring Boot, Node.js, Express, Laravel, ASP.NET MVC, REST APIs, Microservices, Event-Driven Architecture, Socket.IO, WebRTC

Frontend and Mobile: React, Vite, Tailwind CSS, HTML, CSS, Android (Kotlin, Jetpack Compose)

Databases and Tools: MySQL, PostgreSQL, Firebase, Git, GitHub, GitLab, Maven, Postman, Swagger, Google Sheets API, Render

AI and Automation: Generative AI, LLMs, AI Agents, Prompt Engineering, RAG, LlamaIndex, ChromaDB, AI-Driven Development

Security: Cybersecurity Fundamentals, Linux, Network Security, SIEM, IDS, Vulnerability Management, Incident Response

Practices: Agile (sprints, planning, reviews), Integration Testing, Technical Documentation

PROFESSIONAL EXPERIENCE

Software Engineer | 3D Lab

09/2026 - Present

Belo Horizonte, Brazil

- Architect, plan, and implement full-stack features for internal ERP web modules using JavaScript, PHP, Laravel, and Python.
- Apply Generative AI, LLMs, AI agents, and prompt engineering to build automation scripts, refine features, and improve team productivity.
- Develop and maintain solutions that combine relational databases and third-party API integrations.
- Participate in agile cycles (sprints, planning, reviews), feature testing, structured bug reporting, and technical documentation.

Software Developer | Benericks Cocktail Co

02/2025 - 06/2026

Belo Horizonte, Brazil

- Built and deployed a Java backend system that automated repetitive tasks, eliminated manual processes, and increased team productivity.
- Implemented integrations for automated cash flow management, processing up to 100,000 BRL per month through automatic data feeds into spreadsheets.
- Modeled data, refactored code, and designed event-driven architectures to capture and record critical business information.
- Maintained and extended Java and Spring Boot microservices to continuously automate administrative workflows.
- Created new features, REST APIs, and optimized integrations with external systems for real-time consolidation of financial data.
- Developed scripts and algorithms to validate and automatically enter data into relational databases and dynamic spreadsheets.

Financial Analyst | Benericks Cocktail Co

10/2020 - 02/2025

Belo Horizonte, Brazil

- Controlled and monitored company cash flow, accounts payable and receivable, and bank reconciliation, ensuring compliance with financial deadlines.
- Prepared management reports and indicators to support decision-making and supported the monthly financial close.
- Issued, verified, and controlled invoices, payment slips, and financial documents; supported administrative, accounting, and tax areas.

- Controlled expenses and budget, monitored operating costs, and liaised with financial institutions for payments, receipts, and banking services.
- Automated financial processes with advanced spreadsheets and digital tools, reducing manual activities and increasing operational efficiency.
- Contributed to continuous process improvement, increasing control and productivity in the finance area.

PROJECTS

StreamHub | Self-Hosted P2P Screen Sharing

https://github.com/Inwtn/streamhub | *Live demo: https://streamhub-inwtn.onrender.com/*

- Built a self-hosted, invite-only screen sharing web app where one host shares a tab, window, or display with up to five viewers over WebRTC; media travels peer to peer and nothing is recorded or stored by the server.
- Implemented room management, access control, and real-time signaling (REST and Socket.IO) with separate host and viewer credentials, instant access revocation, and a dedicated peer connection per viewer, including late joiners.
- Added capture presets from 720p/30 to 1080p/60, live diagnostics (RTT, packet loss, jitter, bitrate), adaptive video bitrate under high packet loss, and an optional Discord slash-command bot for managing invites.
- Wrote automated integration tests covering credentials, viewer capacity, expiration, signaling permissions, late joins, and room closure; deployed from a monorepo to Render using a Blueprint.

  Technologies: Node.js 22, TypeScript, Express, Socket.IO, WebRTC, React, Vite, Tailwind CSS, Discord Bot API, Render

Finance Sync API | Java, Spring Boot

01/2026 - Present

https://github.com/Inwtn/API-Finance-Sync

- Built a REST API in Java and Spring Boot that automates cash flow processes, acting as integration middleware that receives financial transaction data over HTTP and posts it in real time to management spreadsheets in Google Sheets.

  Technologies: Java 17, Spring Boot, Lombok, Google Sheets API v4, Google Auth Library (Service Accounts), Maven

Bank Reconciliation Engine | OFX and CSV

https://github.com/Inwtn/bank-reconciliation

- Built an automatic bank reconciliation engine that cross-references bank statements (OFX and CSV) with recorded financial entries, matching by amount, type, and date with configurable day tolerance.
- Classifies each transaction as Reconciled, Divergent, or Pending; includes a web dashboard, import history, and a REST API documented with Swagger UI.

  Technologies: Java, Spring Boot, PostgreSQL, Maven, Docker

EDUCATION

Systems Analysis and Development | Newton Paiva

01/2025 - Present (in progress)

Belo Horizonte, Brazil

- Field of study: Software and computer application development and analysis
